

RVS Simulator Status

RVS-WG 8, Padua

Mark Cropper

Simulator Overview

- No improvement to core code since the last WG meeting
- User interface now implemented for external use:
 - interface simplified
 - job submitted automatically with unique identifiers
 - acknowledgement sent by email
 - job may take some time to run
 - further email sent on completion, with location at which to pick up the files
- Output includes
 - generated image
 - star positions, spectral types, magnitudes
 - parameters used
 - log file of the processing

Welcome to our GAIA-RVS Simulator

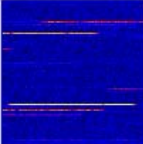

This is a simulator that has been produced by a team at **MSSL** as part of our development of the GAIA-RVS instrument. The simulator is written in C++ and returns a FITS image similar to that which we shall receive from the GAIA-RVS instrument when it is launched.

The simulator is available via this web site. You will be required to input the parameters you require for the test. An email will be sent to you on completion of the simulator, with links to where you can collect your image.

GAIA-RVS Simulator Input Parameters

Please enter your contact email address:

Please input your simulation parameters below:

1. Galactic latitude range:	<input type="text" value="0 - 5"/> <input type="text" value="5 - 10"/> <input type="text" value="10 - 30"/> <input type="text" value="30 - 90"/>	[degrees]	<input type="button" value="Help"/>
2. Number of AL [along-scan] pixels:	<input type="text" value="1000"/>	[500 - 1010]	<input type="button" value="Help"/>
3. Number of AC [across-scan] pixels:	<input type="text" value="1000"/>	[500 - 3930]	<input type="button" value="Help"/>
4. Cosmic Background [e-/pix/readout] :	<input type="text" value="1.23"/>		<input type="button" value="Help"/>

GAIA-RVS Simulator Parameter Verification

Please check that these are the correct parameters you wish to submit.

EMAIL ADDRESS: msc@mssl.ucl.ac.uk

Primary Parameters	Secondary Parameters
GALACTIC LATITUDE RANGE: 0 - 5	MINIMUM SPECTRUM WAVELENGTH: 848.00
NUMBER OF ALONG-SCAN PIXELS: 1000	MAXIMUM SPECTRUM WAVELENGTH: 874.00
NUMBER OF ACROSS-SCAN PIXELS: 1000	PIXEL ALONG-SCAN WIDTH: 10
COSMIC BACKGROUND: 1.23	PIXEL ACROSS-SCAN WIDTH: 15
TOTAL DETECTION NOISE: 2.0	FWHM ALONG-SCAN: 4.3
TOTAL SCAN IN VERTICAL DIRECTION 0	FWHM ACROSS-SCAN: 4.3

Thankyou for using our *GAIA-RVS* Simulator

Your simulator request is being processed. Please await a confirmation email to say that the simulator has successfully been connected. If you do not receive this email please contact [MSSL](#) for support.

The package you receive will contain:

1. image.fit [image file]
2. parameter.dat file [the parameters you submitted]
3. source.dat file [the star sources]
4. log.dat file [the program report including version details]

Return to: [Program Homepage](#)

Further Work

- Need to generate a suite of images from different parts of the focal plane to include optical characteristics – images are all the same at present
- Need to include cosmic rays and pixel defects
- Need to include CCD effects (MTF etc,)
- Update the interface to accommodate changes

Will be used (at least) for the RVS on-board algorithms, but open to public use. Please respect processing capability at MSSL.
